

## ICT Disaster Recovery

### Description

ICT Disaster Recovery is that part of business continuity management which relates to an organisations ability to protect and recover its information technology capability. The course looks at how ICT Disaster Recovery links with BCM and how the business drivers need to be translated into 'techno speak'.

Classroom teaching, videos, discussions, exercises and analysis of case studies form the teaching approach in this one day course.

*Our trainer* has a flexible approach to training, making him suitable to both experienced senior management professionals as well as general employees and small businesses. He brings a high level of senior experience and professional expertise to his teaching role. This includes a Masters in Business Continuity, Security and Emergency Management, two Professional Fellowships awarded by the Institute of Business Continuity Management and also the British Computer Society, and he is also an associate lecturer at Manchester Metropolitan University.
